Cnc machine tools companies

When many hobbyists or people doing renovations have completed their project, they find themselves with a ton of new and used machine tools that they no longer need or have room for. Some stop giving away the tools, donating them or even throwing them away. These people can make a lot of money by selling their tools, but many don't know how to go about pricing, advertising and selling the tools. Fortunately, selling tools is a relatively simple process and does not require an intermediary if you want to sell the tools yourself and avoid paying a commission. Visit the websites of machine tool sellers (such as Home Depot, Ace Hardware, and Lowe's) to determine their pricing for similar tools. Determine your own pricing for each of your tools. New machine tools should be priced about 15 percent lower than retail competitors' prices. Used machine tools should be priced 40 to 50 percent lower than retail competitors' prices for new machine tools. Write a detailed description of each tool, including its uses, age, condition, and manufacturer. Take a digital photograph of each tool. Each photograph should be taken at the highest possible quality in a well-lit area. Visit Craigslist.org and publish an ad in your city that offers your tools for sale. Include description, photography, and pricing. Include your email address for people to answer and your phone number if you want. Respond to people interested in buying your machine tools and arrange to meet. Warnings Never accept payment in the form of a personal check, as personal checks may bounce or be fraudulent. Cash is the safest form of payment, but a cash check or mail entry is also relatively secure. February 2, 2017 5 min read Opinions expressed by Entrepreneur Contributors are their own. No company, small or large, can afford to ignore cybersecurity. According to a recent Verizon Data Breach Investigations Report, 60 percent of cyber attacks target SMEs, largely because they are easier targets. Related: 4 reasons why you need developers with cybersecurity skills in all Tech teamsBut you don't have to be passive. Here are five tools and services that SMEs can use to protect themselves.1 Get secure hardware in the office. In the rush to secure the cloud, the hardware is often overlooked, says Christoph Schell, President, Americas, HP Inc. The truth is, if you have 500 employees, it's easier to have a secure cloud structure than to secure 500 laptops. Reduce risk through security-centric device management and proactive methods and policies to engage each employee in the security process. In addition to creating a secure network, small businesses must choose secure hardware and adopt secure protocols to truly protect themselves. HP Inc., has developed touchpoint manager security software to help companies policy, minimize security concerns and monitor protected systems.2 Keep spies out of your e-mail. Marketers, lawyers and people are widely using email tracking solutions to improve sales and better engage with prospects and current customers. These solutions are popular in CRM systems as well. But cyber criminals also use these tools to track the date and time emails open, where they are opened, where they are forwarded and so on. MailControl allows companies to block spymail from hitting their inbox. It is a particularly effective tool to prevent targeted phishing attacks from reaching your business.3 Stop ransomware. The most common cybersecurity risk for small businesses today is ransomware. The FBI estimates that over 4,000 U.S. companies are infected with ransomware every day. Ransomware takes control of the files on small business networks by encrypting them and holding them for ransom. The existing tools, such as anti-virus, are not effective against the rapidly changing variants. WatchPoint has an easy-to-use tool, called CryptoStopper, that small businesses can download and install to protect their network. CryptoStopper distributes bait files throughout a network. Once these bait files are encrypted, the infected user is isolated, and the ransomware is stopped before doing damage. This is a new and unique method to stop ransomware. Related: 6 Reasons Smart Small Business Owners Invest in Security4. Train your employees. One of the most common, and preventable, attacks against small businesses is a social-engineering attack triggered by phishing attempts, improper web usage or incoming phone calls. The most up-to-date training systems on the market are designed for large companies, but some companies are setting up our solution to help all size companies, from those with only a few employees to those with thousands. Security Awareness Training - Security Mentor: Employees aren't always ready to fight a cyber attack or know when they're attracted to you. Security Mentor has created 10-minute lessons with its security awareness training program. Small businesses will be able to train employees to be aware and alert, while making the right choices in a potential cyber crisis through these short, online lessons.5. Get SLL for your website. Traditionally, companies have used SSL/TLS certificates (shown as https) only on shopping carts or login pages. This may help, as it encrypts the data sent between the customer's computer and the SMB's web server. If companies use an Extended Validation (EV) certificate, your browser will also display a green padlock and site address field, as well as the company name next to the site address. Today, however, companies are encouraged to follow what is called Always on SSL. This means that the entire site is protected by https, instead of just a few pages. This helps protect against modern attacks that try to steal information when a website visitor browses between secure and unsafe pages. Finally, Dan Hubbard, product CTO of Cloud Cisco Systems, shared some advice. There are a few few small businesses can do, he says. First, make sure you have security solutions in place that have been shown to detect and stop the majority of malware — and make sure they are deployed at critical points within your company. Second, when it comes to ransomware: Back up your data. If you have a copy of your information that the attackers cannot access, you are not in their favor. Related: 7 Cybersecurity Layers Every entrepreneur needs to understandIn the sum, you don't have to do everything, but do something. Attacks occur and small businesses need to pay close attention to cybersecurity as they increasingly become a focus point for attackers. February 27, 2015 4 min read Opinions expressed by Entrepreneur Contributors are their own. News reporting is increasingly moving online, forcing entrepreneurs and larger companies to focus their public relations efforts on digital journalism or risk being left behind by more connected, tech-savvy competitors. Fortunately for entrepreneurs and PR practitioners, a number of mobile and web-based innovators have come up with new tools that make managing PR in the digital age a better, faster and easier endeavor. In my role as a media relations professor and PR agency founder, I am constantly experimenting with any new publicity tools I can get my hands on. Most people don't make the cut past the first day, even fewer do it a whole month. Here's my latest roundup of tools that passed my test and can help move the needle on your PROMOTIONAL campaign:Related: 4 Requirements for Self-Serve Media Relations1. Haro. Help A Reporter Out, or HARO for cards, is a fantastic email subscription service that connects reporters in need of sources of people who are actively looking for press coverage and who have relevant stories or expertise to share. HARO, which has been around for a few years now, has reached a tipping point with more than 30,000 participating journalists, and many reporting for top-tier outlets. A free subscription delivers reporters' questions three times a day. A paid subscription provides access to premium services such as getting a head start over those who choose the free service. 2. Talkwalker Alerts.Social-media analytics company Talk Walker offers a free alternative to Google Alerts for monitoring news about businesses and industries. The free alert service can provide you with near real-time email updates on your company's latest relevant mentions on the web. I recommend using both Google Alerts and Talkwalker Alerts for redundancy as neither services catch 100 percent of mentions. Both can sometimes be delayed and they are both free, so why not sign up for free Talkwalker Alerts? Related: 14 Incredibly Free Stock Photo Websites3. Foap.When running a promotional campaign, stock photography spending can stack up quickly and your image library can grow stale even faster. Enter Foap, which offers a next-generation low-cost stock-photography resource that in hundreds of thousands of photographers through their their and delivers relevant, high-resolution images on demand for just \$10 each. Buyers get the rights to each photo purchased, Foap gets \$5 and the photographer retains \$5. Consider searching the Foap photo database, buying photos, and downloading the Foap app. 4. Muck Rack.De most journalists are active on social media. After all, that's where their stories get shared. While social media platforms are fantastic for news sharing, that doesn't mean it's easy to use them to identify suitable reporters to engage with and pitch. Muck Rack helps PR practitioners navigate through the clutter of social media to discover and connect with journalists who actively discuss topics relevant to an industry, product or service. Muck Rack also sends out a free daily email called Muck Rack Daily that gives its readers clear insights into news trends and journalists with traction. Sign up for free Muck Rack Daily. There are also premium service plans that provide the ability to create and save media listings, as well as set media alerts based on keywords.5. Analytics.Google Analytics can be incredibly helpful for understanding the impact that promotional activities have on a website by monitoring traffic driven by the press. Analytics is an easy-to-use app that makes Google Analytics even better by serving important data points on mobile devices. Analytics pure user interface relays real-time page views, referral information, demographics and bounce rate data immediately after the launch of the app. Analytics is free for monitoring as many as eight separate domains but only available for iOS devices.
